RAM No-Drill™ Seat Bases
National Products, Inc.

**Vehicle base for the
FORD EXPLORER (2002-NEWER)
FORD EXPLORER SPORT TRAC (2007)
MERCURY MOUNTAINEER (2002-NEWER)**

INSTALLATION INSTRUCTIONS

If installing this base with a RAM tele-pole assembly, attach the lower female pole prior to installing the No-Drill™ base.

1. Move the passenger seat to its rearmost position and remove the plastic trim covering the seat frame leg closest to the passenger side door. This piece may be replaced after installation or stored for later use.
2. Remove the front seat rail bolts using a 15MM socket wrench. Using an extension with the socket wrench is recommended.
3. Without moving the seat, place No-Drill™ base over the front of the seat bracket and in line with the exposed threaded holes.
4. Re-install seat bolts using the socket wrench with extension. Note that you may need to put some pressure on the front of the seat cushion to assist in re-aligning the seat rail bolt holes. Start threading bolts by hand if possible to prevent any cross threading. Fully re-tighten the bolts.

Once installed, this base will lessen the amount of travel available to the passenger side seat. Though minimal, it is worth noting.
